

# GD Bart Puppy Test

Helen West

Canine Behavior Specialist - Guiding Eyes for the Blind - [hwest@guidingeyes.org](mailto:hwest@guidingeyes.org)

BCL Consultant - International Working Dog Registry - [helen.west@iwdr.org](mailto:helen.west@iwdr.org)

# Thank you

Yorktown Heights, NY

## Our Agenda

1. About the GD Bart Puppy Test
2. Scoring, using results and predictions of success
3. Using physiological data for scoring puppy test?

## GDBart Puppy Test

- Standardized test
- Freely available
- 21 test components
- 12-15 minutes per pup
- 8 weeks of age
- 3 People needed:
  - Scorer
  - Handler
  - Helper/Videographer
- Equipment easy to create and purchase
- Indoor test- approx 24 x 24 ft (7.3m x 7.3m)

Smaller ok

## Behavior Checklist

Behavioral scoring system that standardizes behavior scoring across multiple organizations.

Behavior Checklist, Add new

**Behavior Checklist Edit**

BCL items required in each observation situation listed below

Y = Yes

O = Optional

Pup	Pup	GD	Trn	Behavior Checklist Item
Y	Y	Y	Y	1. Anxious new situations
Y	Y	Y	Y	2. Noise sensitivity
Y	Y	Y	Y	3. Fear objects
Y	Y	Y	Y	4. Fear of underfootings
O	Y	Y	Y	5. Fear of dogs

**Dog** Mabel GEB 1MM15 LRBk 2015-06-28 Guiding Eyes for the Blind (GEB)

**Date \***

Date when BCL was scored

**BCL Type \*** Please select

Type of behavior checklist

**Person Who Scored \***

type name of who scored BCL, add new if no match [Add new](#)

**Organization Where Dog Tested \***

Guiding Eyes for the Blind (GEB)

**Puppy Raiser**

type name, add new if no match [Add new](#)

Who is the person who is influencing the dog's training during the time period of this behavior checklist

**Number of Dogs Raised**

**Video Link**

NoS = No Score Abs = Absent VMd = Very Mild Mid = Mild  
Mod = Moderate Sev = Severe NA = can not score in this situation

Released for this

**1. Anxious new situations**

☒ NoS ☐ Abs ☐ VMd ☐ Mid ☐ Mod ☐ Sev ☐ NA

Initially anxious during first visits to unfamiliar locations. Exhibited as increased or inhibited activity, cautious and/or less responsive or focused

**Anxious New Situations Notes**

Notes about anxiety in new situations

☐

**2. Noise sensitivity**

☒ NoS ☐ Abs ☐ VMd ☐ Mid ☐ Mod ☐ Sev ☐ NA

Startle, tense body language, hurries, escape, or displacement

**Noise Notes**

Notes about fear of noises

☐

**3. Fear objects**

☒ NoS ☐ Abs ☐ VMd ☐ Mid ☐ Mod ☐ Sev ☐ NA

Fearful, avoidant or suspicious of unfamiliar objects, which could be anything, but common examples are plastic bags, statues, yard equipment, balloons, etc.

**Fear Objects Notes**

Notes about fear of objects

☐

**4. Fear of underfootings**

☒ NoS ☐ Abs ☐ VMd ☐ Mid ☐ Mod ☐ Sev ☐ NA

Fearful, nervous, apprehensive of various walking surfaces

**On Gratings**

☐

Check box if dog has fear walking on grates

**Slippery Floors**

☐

Check box if dog has fear on slippery floors

**Underfooting Notes**

Notes about fear of underfootings

☐

**5. Fear of dogs**

☒ NoS ☐ Abs ☐ VMd ☐ Mid ☐ Mod ☐ Sev ☐ NA

☐

# Need Multiple Observations- include early soc observations

- Amount of early socialization impacts test reliability
- Puppies are only about 50% through their most influential critical period
- Most aspects of behavior are heavily impacted by environmental influences
- Use 3 to 6 early socialization observations PLUS GD Bart Puppy Test to score the Puppy Test Behavior Checklist

# BCL Scores- General Concept

5	Absent	<ul style="list-style-type: none"><li>• Relaxed with no or rare stress signals</li></ul>
4	Very Mild	<ul style="list-style-type: none"><li>• Very mild stress signals</li><li>• Slightly less able to respond without support good with minimal support</li><li>• Improves when repeat, recover very quickly</li></ul>
3	Mild	<ul style="list-style-type: none"><li>• Mild stress signals</li><li>• Mild loss of responsiveness, better with support and reassurance</li><li>• Improves when repeat recover reasonably quickly</li></ul>
2	Moderate	<ul style="list-style-type: none"><li>• Moderate stress signals</li><li>• Moderate loss of responsiveness even with support</li><li>• Still stressed with repeat</li></ul>
1	Severe	<ul style="list-style-type: none"><li>• Severe stress signals</li><li>• Very slow to recover or can't recover even with support</li><li>• Usually worse with repeat</li></ul>

# What to Look for When Scoring

## Incorporated Into Behavior Checklist Definitions

How the dog is moving (slow, fast)	<ul style="list-style-type: none"><li>• How often does it happen?</li><li>• What causes it?</li><li>• How extreme is it?</li><li>• How long does it continue?</li><li>• What is needed for the dog to return to a productive state?</li></ul>
Body language (compression, scoots, scratching etc)	
Coping strategies (displacement sniffing, scavenging)	
Ability to response to handler	

# Stop The Test

- If the Puppy fails to return to a productive emotional state despite having support, reassurance, and time to resolve any emotional stress or conflict. This may be seen as shutting down or high arousal.

# Why Do Puppy Tests?

Match pup with raiser

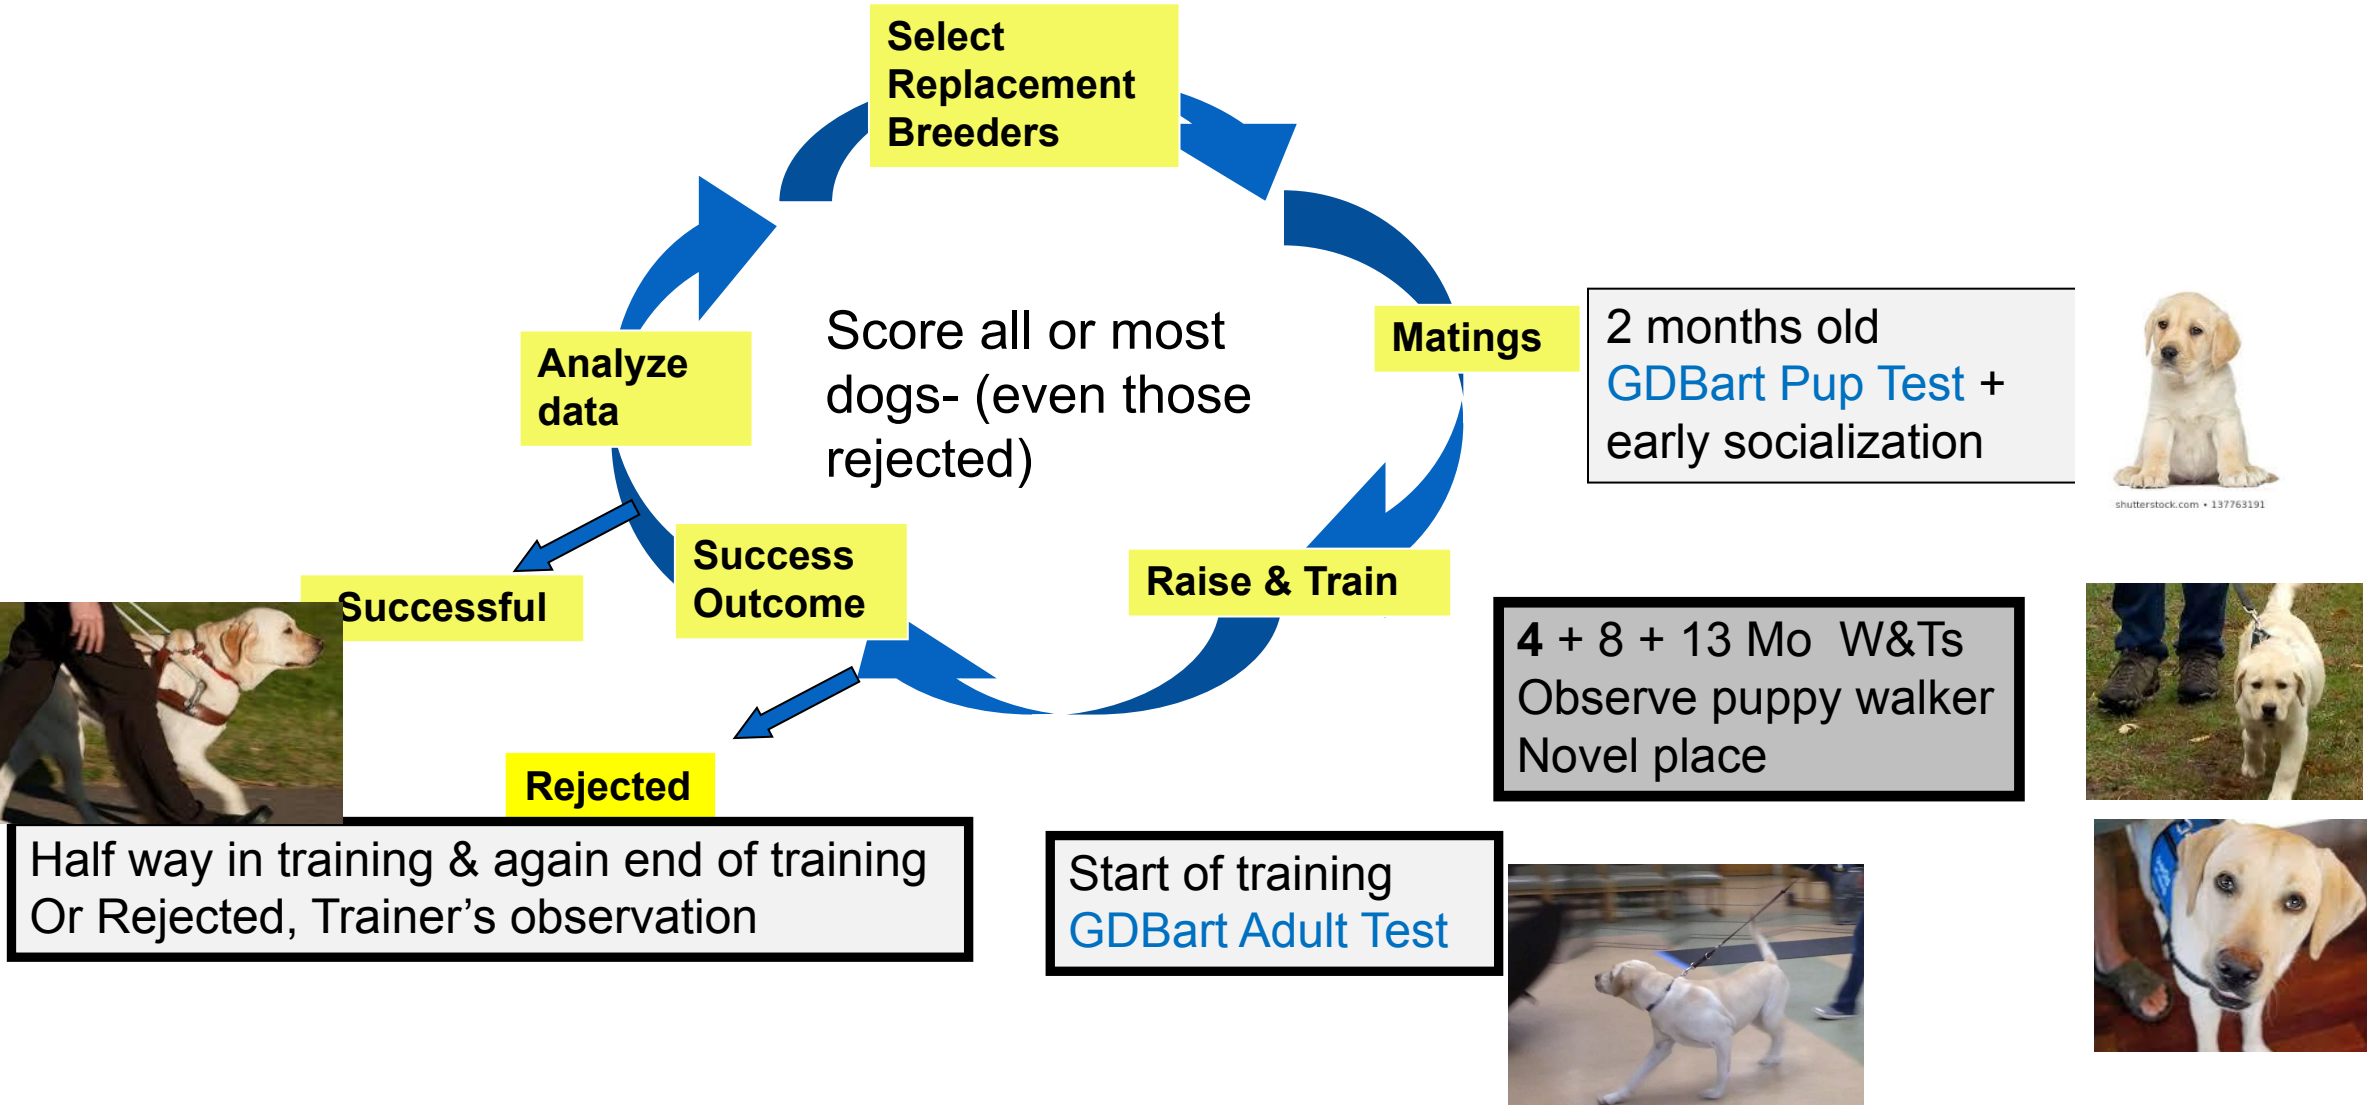

Give you an overview of trends over time e.g. what's improving or getting worse  
Evaluate effectiveness of program changes e.g. changes in socialization protocols  
See what traits are produced by your broods and studs when bred multiple times  
Use some of data in EBV calculations if heritable (trait controlled enough by genes)

Identify dogs that need behavioral or emotional help and  
can intervene and provide support before it potentially  
gets worse

# Puppy Test Is Part Of Longitudinal Data when using the Behavior Checklist

# Accuracy of Predicting Outcome Increases with Age

Environmental influence modifies genetic potential

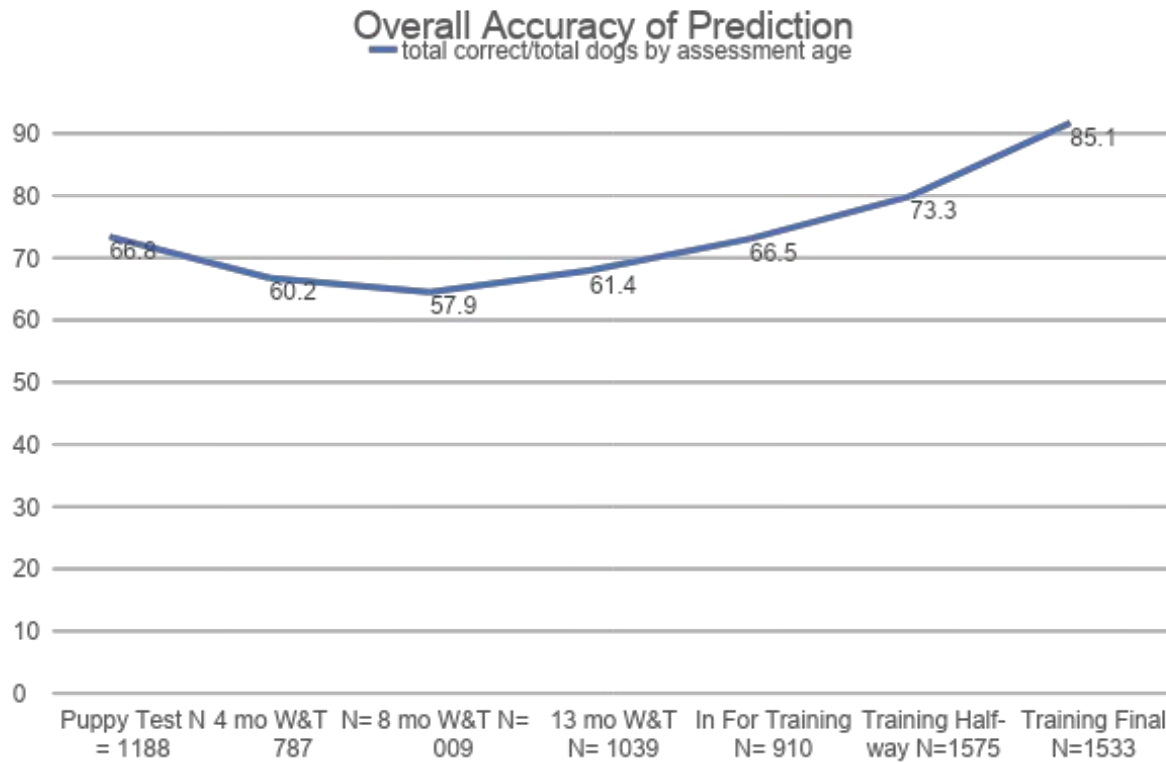

Age	Prediction of success
2 month	34.4%
4 month	57.4%
8 month	56.0%
13 month	61.4%
In for training	66.5%
Prelim blindfold	73.3%
Final blindfold	85.1%

Courtesy of Jamie Fratkin, U. Texas 2014, based on Guiding Eyes data

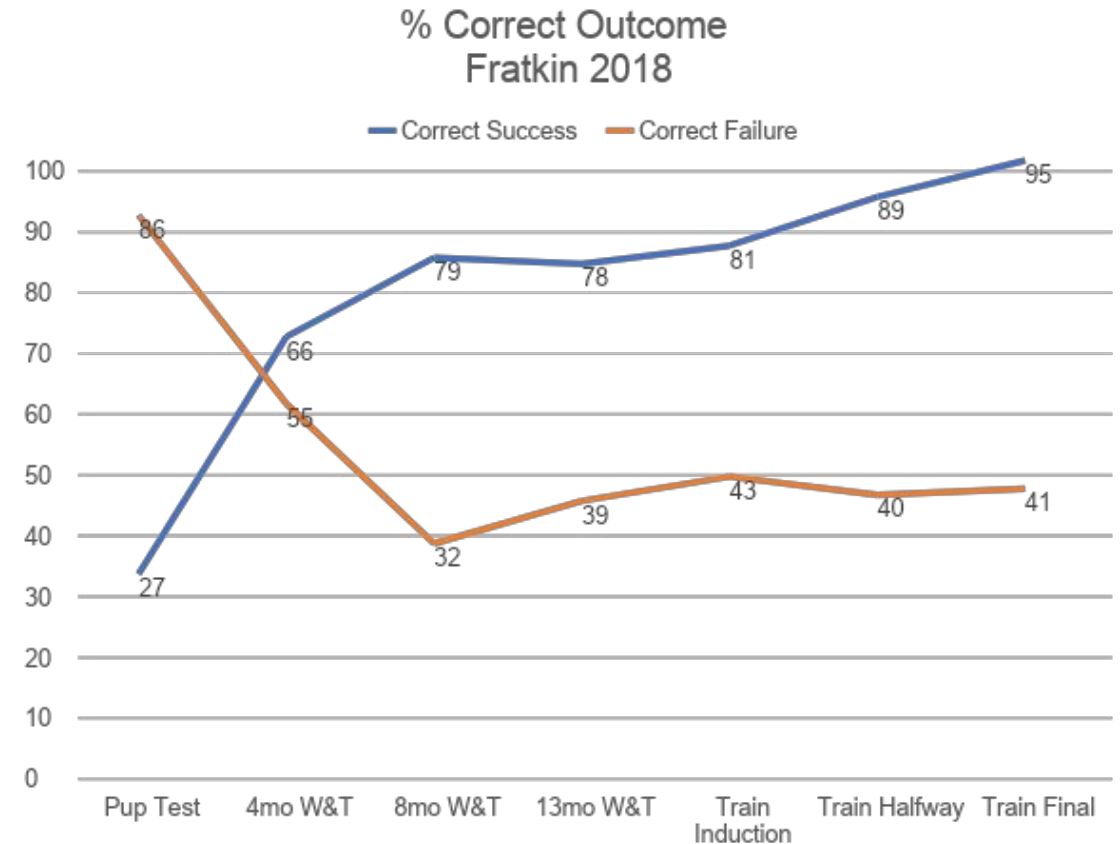

# Should You Career Change Puppies Based On Puppy Test?

Accuracy of predicting outcome  with age

**Early Ages better at predicting failure,  
Older Ages-better at predicting success**

# Summary

## What We Have Learned In Past 35 Years

- Need multiple observations- include early soc observations (5wks to 8wks) with puppy test for first Behavior Checklist scoring
- Quantity and quality of socialization impacts scores
- Need skilled observers/scorers
- Technique of the handler and type of equipment used matters
- Confidence typically improves especially through 16 weeks old when socialized effectively
- Prediction- More accurate predicting failure of extreme puppies

# Is the BCL measuring what we think it is?

Machine Learning  
Cloud storage

Chest-strap:

- IMU
- Heart rate

Computer:

- Coding / Reports

Predicting  
human-expert  
temperament  
evaluations

M. Foster, P. Erb, B. Plank, H. West, J. Russenberger, M. Gruen, M. Daniele, D. L. Roberts, and A. Bozkurt, "3D-Printed Electrocardiogram Electrodes for Heart Rate Detection in Canines," in IEEE BioCAS Proceedings, 2018.

# Conclusion

Results indicate that temperament can be evaluated using physiological data

Table 6. Table showing the accuracy of the minimum, mean, and maximum metrics as well as the standard deviation.

Task	Min	Mean	Max	Stdev
Stairs	86.57%	92.25%	100.00%	0.067
Underfootings	84.93%	92.46%	99.73%	0.074
Umbrella	86.67%	93.05%	99.87%	0.066
Movement mop	86.53%	92.95%	100.00%	0.067
Explore	85.09%	92.62%	99.91%	0.074
Greet/feed/ignore	86.67%	92.97%	100.00%	0.067
Vacuum	85.13%	92.66%	99.88%	0.074
Elevated surface/ Exam	86.73%	93.16%	99.82%	0.065
Can drop	85.33%	92.89%	99.89%	0.073
Fan	86.86%	92.68%	99.86%	0.065
Tunnel	78.86%	91.64%	100.00%	0.106
Mean	85.40%	92.67%	99.90%	

**Problem:** Temperament evaluation of guide dog puppies has historically been subjective

**Solution:** Use objective data (Raw ECG) to predict expert BCL scores

**Outcomes:** Approximately 93% accuracy rate of expert BCL prediction.
