

A German Shepherd dog is lying on its back on a light gray surface. Its front and hind legs are extended, and each paw is held inside a bright orange bootie. The dog's head is turned to the left, and its mouth is slightly open. A black collar with a silver buckle is visible around its neck. In the bottom left corner, a small portion of a green and blue patterned object is visible.

Improving Behavior With Estimated Breeding Values

Breeders Workshop, Vancouver Canada

May 1-3, 2023

Jane Russenberger,
International Working Dog Registry

Our Thanks To

Leading the way
Allowing use of their data and results

Users of IWDR for
Learning to use these
Tools and collaborating in IWDR

What data are required

Best age to measure

Estimates of heritability

Challenges

Response to selection

Multiple Measures- Same Scoring System

What Causes Observed Variation?

Genetic makeup
fixed at conception

Sex and color won't change
due to the environment

Variation in aspects of behavior
very impacted by environment

NData- 14258 NPed- 22807

Dogs evaluated in the same 3 mo period at an organization

- Testing method per protocol, consistently done
- Scoring accuracy
- Data only on breeders (best phenotypes)
- Distribution of genes across dogs measured in the population
- Additive gene effects passed from parents to offspring
- Family within a breed
- Missing ancestors that tie pedigrees together

- Learned Conditioned Emotional Response
 - Sibling interactions (e.g. bullying)
 - Fear of dam
- Socialization quality & quantity at target ages
- Raiser/trainer skills

- Unaccounted for in the genetic model
